APPENDIX:

The Appendix includes the following item(s):

- a new Abstract of the Disclosure

Abstract

Method of automatically processing a speech signal which comprises the steps of:

- determining a sequence of probability models corresponding to a given text;
- determining a sequence of acoustic strings corresponding to the diction of the given text;
- aligning between the sequence of acoustic strings and the sequence of models; and
- determining a confidence index of acoustic alignment for each association between a model and an acoustic segment.

Each determining step of an alignment confidence index is carried out at least from a combination of the model probability, *a priori* model probabilities and the average duration of occupancy of the models.
